

Vacuole

The vacuole contains water for the cell as well as enzymes. In some cases they may contain solids that have been engulfed.

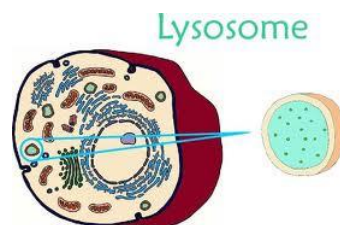

Chloroplast

The chloroplast is an organelle only found in plant cells. It creates glucose for the plant and that provides the plant with energy.

Lysosome

It gets rid of waste for the cell as well as cellular debris. Breaks down substances.

Cell Wall

Only found on plant cells. Thicker membrane around the outside of a plant that helps it stand up and be stable.
